NEW ERA OF POWER ASSISTED LIPOSUCTION

Liposuction can be a very common procedure done all over the world, but, it is one of the surgeries that is considered to have the highest revision rate. Revision Liposuction is a big problem for both surgeons and patients, so preventing these cases from happening is the GOAL in every liposuction surgery. With my presentation, I will share how we can reduce complications and increase positive results using POWER AISSTED LIPOSUCTION. Also I will discuss how power assisted liposuction helps me on my practice to create a 3-Dimensional result considering all the shadows and engraving silhouette lines. Not all power assisted liposuction device are the same, hence it is very important to look for a PAL that will help and be a great tool in your practice.
